the ghosts of **work**

past, future, and present

Past

computer, *n.*, 1613: A person who makes calculations.

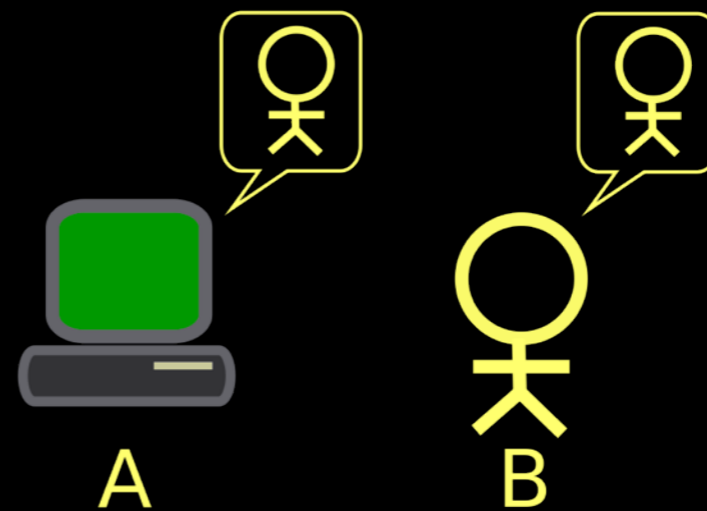

Present

Future

The Turing Test (1950)

The Golden Years of AI

1965, H.A. Simon: “machines will be capable,
within 20 years,
of doing any work a man can do.”

1970, Minsky: “In from 3-8 years we will have
a machine with the general intelligence
of an average human being.”

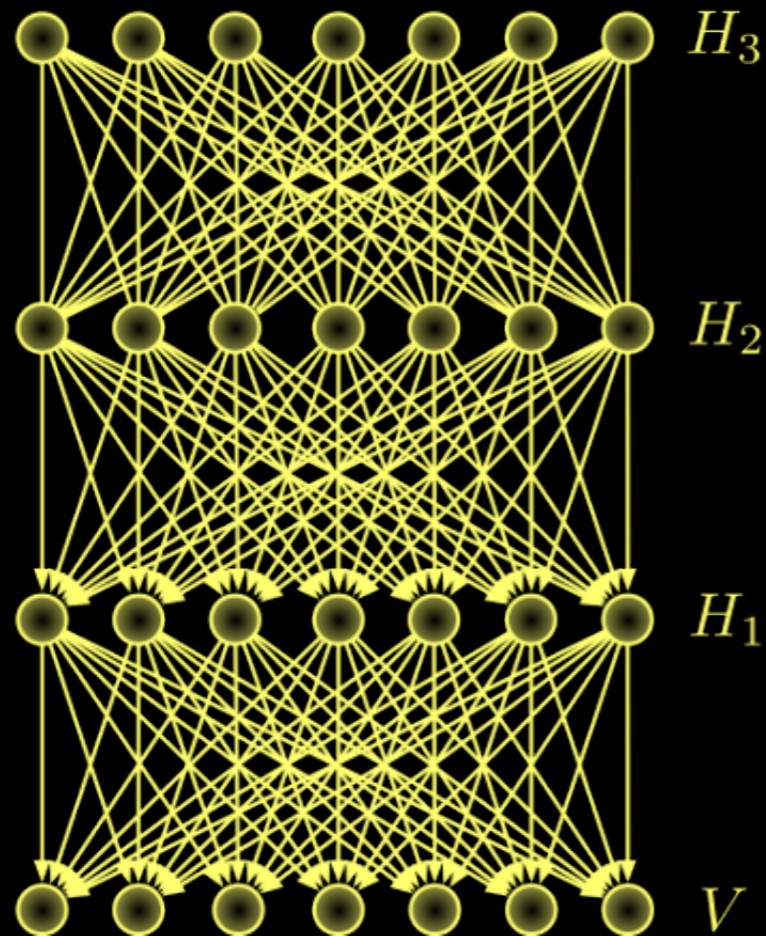

The AI winter

A new dawn for AI?

Crowd-Labor applications

Common applications

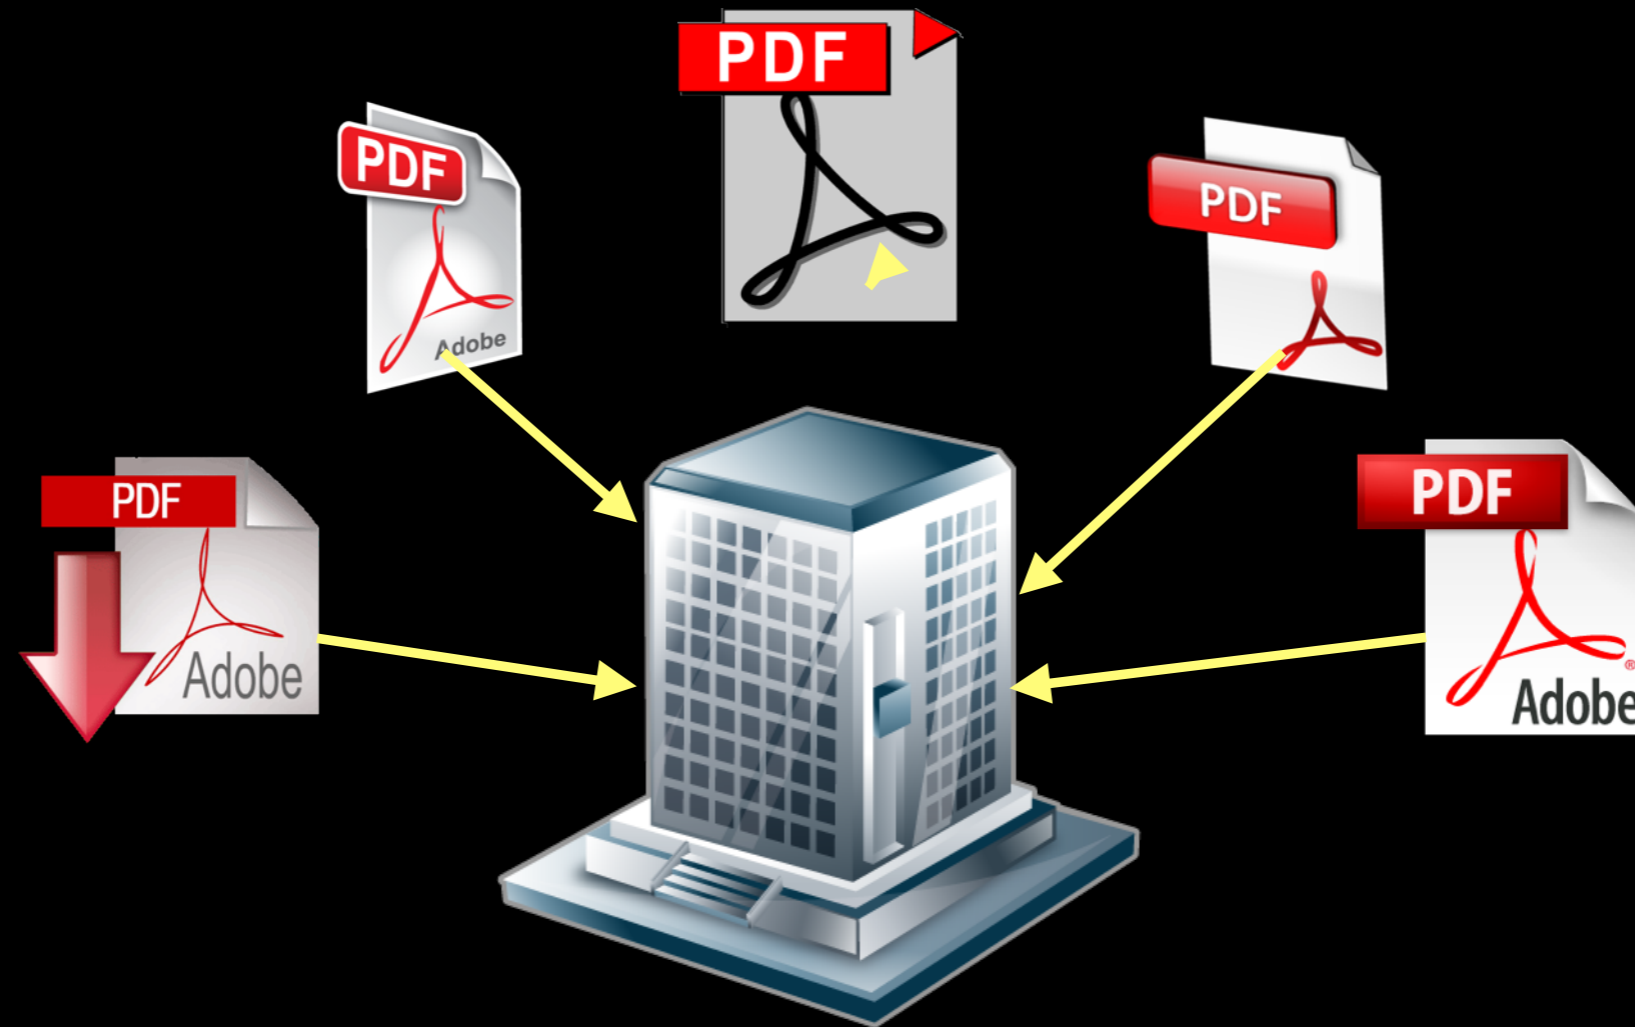

Data entry

Categorization

Content generation

...

Case study: Data entry

Workplace safety company

courtesy of CloudFactory

In-house approach

Complicated, undocumented
business process

Unreliable results

Costly training, high
turnover

Can't scale to meet
demand

Crowd-Labor approach

Virtual assembly line
Multiple eyes per task

Reliable results

Small microtasks with
no training required

Scales to meet
demand

Data Entry

Temp workers

86% accuracy

Crowd-labor with auto QA

98% accuracy

Better grammar = \$\$\$

“We noticed that

demand for a hotel **increases** if the **reviews** on TripAdvisor and Travelocity are **well-written**, without spelling errors;

this holds no matter if the review is **positive or negative.”**

Source: Panos Ipeirotis

“we’ll just implement a grammar checker to do it”

“we’ll hire interns and outsourcers to do it”

“let’s hire the **crowd** to do it”
